Casio men's ga100l premier g-shock

TODAY'S BEST DEALSThe Casio G-Shock Rangeman can harness the power of the sun to keep you going when you're in the wilderness, miles from a plug socket.That's because it's the world's first solar-assistant GPS navigation smartwatch. It's also the first smart G-Shock watch, so the Rangeman is breaking a lot of new ground.Its rugged looks, mud-proof design and GPS means it's targeted at those who spend most of their time outdoors - this isn't a stylish statement wearable you'd wear to a club.The Casio G-Shock Rangeman release date is set for April, which means you have a few months to save up. And save up you will more than likely need to.That's because the G-Shock Rangeman price comes in at \$300 (around £600, AU\$1,000), which makes it one of the most expensive smartwatches around.The Casio G-Shock Rangeman is a beast of a smartwatch. It's big, brash and brutal, dominating your wrist.While that might not make it practical as a daily timepiece, that's not the reason it exists. The G-Shock Rangeman has been developed to survive the rigors of the outdoors.Not only is it water and dust resistant, it's also mud resistant. Gaskets have been fitted to the buttons to ensure the brown stuff doesn't sneak inside when the weather turns grim.While this is handy, it does make the buttons a little difficult to press. You need to apply some force, and fully depress the five buttons for the action to register on screen. A light tap of a key won't give you any results.You get three chunky buttons on the right of the case, with the central crown also rotating, allowing you to scroll through menus and options.On the other side you'll find two more buttons, with the lower one programmed as the back key for the interface.Casio G-Shock Rangeman hands on galleryImage 1 of 10Image 2 of 10Image 3 of 10Image 4 of 10Image 5 of 10Image 6 of 10Image 7 of 10Image 8 of 10Image 9 of 10Image 10 of 10Solar power and GPSYou'll notice that there's a sizeable bezel running around the display on the G-Shock Rangeman, but as you may have already guessed there's a good reason that.Yep, that's the solar panel, allowing the watch to harness the power of the sun and top up its battery.Specifically the solar-assisted charging tops up the battery for the GPS. The on-board GPS can be used to plot routes and track your progress live on-screen.GPS is usually rather power hungry, which means battery life can take a real hit if you're using it continuously. A full standard charge of the G-Shock Rangeman can give you up to 33 hours of continuous GPS use, but the solar panel can up that to 48 hours, allowing you to track your location for two full days in the wild without the need to find an alternative power source.Four hours of sun will produce around one hour of GPS usage, so it's not the fastest, but it could well make all the difference if you are somewhere remote.Display and interfaceUnlike most smartwatches, the Casio G-Shock Rangeman has a rather basic black and white display. It makes sense, as it's easier to see in bright light and is less power hungry, giving you better battery life.Thanks to the sizable bezel of the solar panel though, the screen is also quite small with menu text being rather small. If your eyesight isn't great you may well have trouble reading what's on screen.It's also not the most intuitive watch to use, with various menus and sub menus, and abbreviations of features which don't make it clear to more novice users what's going on.Once you've got the hang of scrolling lists and selecting options using the crown button, and returning to the previous screen with the back button it does get a little easier to use, but there could be quite a steep learning curve initially.It links to your smartphone via Bluetooth and the dedicated application will be available on both iOS (iOS 10+) and Android (Android 6+). The app provides more detailed information and data about your terrain, routes and movements which the watch screen can't display.Early verdictThe Casio G-Shock Rangeman is an expensive, brutish smartwatch which doesn't have a great screen or showstopping looks - but in reality, non of that matters.It's a smartwatch with a very specific purpose and for a certain audience it could well be a very powerful tool.The introduction of the solar-assisted charging could be a big step for wearables though, and it could lead to more devices taking advantage of the sun.New year, new tech - check out all our coverage of CES 2018 straight from Las Vegas, the greatest gadget show on Earth**TODAY'S BEST DEALS** 1 / 4 1 / 4 1 / 4 1 / 4 1 / 4 1 / 4 () (Affiliate Notice: G-Central may earn a commission on sales from our links to Amazon, eBay, and Reeds.) See the newest G-Shocks in our curated Amazon shop (affiliate link) Featured, G-Shock, News, Shopping G-Shock Japan announced five new GA-100 models based on military and emergency rescue colors. The GA-100L series features bands with a contrasting color on the underside, a design inspired by the lining of military flight jackets. The color of the inside band can be seen from the side of the band and through the clasp holes, offering a unique and fashionable look. The GA-100L models have a retail price of ¥14,500 JPY. Update: Casio announced an Asia release for the five GA-100L models and Casio America announced the GA100L Military Color Series with model numbers GA100L-1A, GA100L-2A, GA100L-4A, GA100L-7A, and GA100L-8A with a list price of \$99 USD each. GA-100L-1A - Black with green ring dial and green inner band. GA-100L-2A - Blue with orange index accents, orange hands, and orange inner band. GA-100L-4A - Orange with orange hands and black inner band. GA-100L-7A - White with black inner band. GA-100L-8A - Sand beige with black inner band. Pexels/Pixabay Casio first introduced the G-Shock line of watches in 1983 and sold more than 100 million watches by 2017. This popular brand of durable watches for men and women are supposed to be nearly damage-proof. However, not everyone adapts to how to use this style of watch instantly. Read on to learn how to set the time on your Casio G-Shock if it needs to be reset. Getting Familiar With the Watch Buttons Unlike a typical watch that may have dials and winders, the Casio G-Shock line, for most model types, is essentially controlled through four buttons that appear on the edge of the face. The top left is the A button, and the top right is the B button. The lower left is the C button, and the lower right is the D button. Some model's button arrangements are slightly different, with the bottom left and right buttons labeled D and E, with C being a long button located midway down the side. Other models have a button along the bottom, which is known as the L button. However, most G-Shock watches have the A through D configuration. How to Set a G-Shock Watch Manually If you need to change or update the time, you may want to set the time on your watch manually. To do so, you must enter into timekeeping mode. To put the watch into timekeeping mode, hold down your A button for a few seconds. Keep in mind that the A button is the same on all models. Once you do this, ADJ should appear on the screen, followed by SET. More modern versions of the watch may ask you to set the time zone prior to setting the time. Use the buttons — top and bottom — on the right side of the watch to navigate through the proper screens. Your watch may ask you if you are currently observing Daylight Savings Time. You can also choose 12-hour military format to display time or 24-hour standard time. How to Set for Atomic Timekeeping More modern versions of the G-Shock watch may be compatible with atomic timekeeping. This means that the watch can reset itself with an atomic clock found somewhere in the world. To set for atomic timekeeping, take it off and place it in a window sill. The area should be free of obstruction and free of electronic signals that may interfere with updating the watch. Casio says it should set itself within 12 minutes or less, but letting it sit longer to be sure is recommended. How to Set Your Watch Via Your Phone If you have a modern G-Shock that has Bluetooth capabilities, you can reset the time through your phone or tablet via Bluetooth. You will first need to download the Connected app from Casio, which is for G-Shock watches. Make sure Bluetooth is enabled on your phone and that the watch is within three feet of the phone. Run the app and hold the lower-left — C — in most cases — button down on your phone for 4 seconds until a connection is made. If You Need Help Setting or Using Your Watch If you still are having a hard time setting the time on your G-Shock watch and can't locate your physical owner's manual, it's possible to look up your exact model number's owner's manual online. Every Casio G-Shock, whether it's old or new, has a four-digit model number on the back that corresponds with a manual. Either enter the model number into the official Casio site for support or enter it along with "Casio G-Force" into a search engine for broader results. Features of G-Shock Watches G-Shock series watches are popular with customers because of their durability, which includes water-resistance and shock-resistance. For example, the G-Shock GST-B100D-1ACR model offers up to 200 feet of water-resistance, which is perfect for those who love to swim or dive. It is also completely shock-proof. Other features of this and many G-Shock models include daily alarms and signals that you can set (also by entering timekeeping mode via button A), an eight-month battery length, and a full calendar mode. Different models are constructed of different materials, but many have a tough stainless-steel frame with mineral glass. **MORE FROM REFERENCE.COM**
